
The World of Computer Vision

By Turki Alsaedi for Misk DSI 2022

Table of Contents

What is Computer Vision?

Computer vision is an interdisciplinary scientific field that deals with how computers can gain high-level understanding from digital images or videos.

Computer vision aims to solve:

- Processing images and extracting information using context
- Making decisions using extracted information

How to Detect Faces?

Computer Vision problems can be solved either via

01

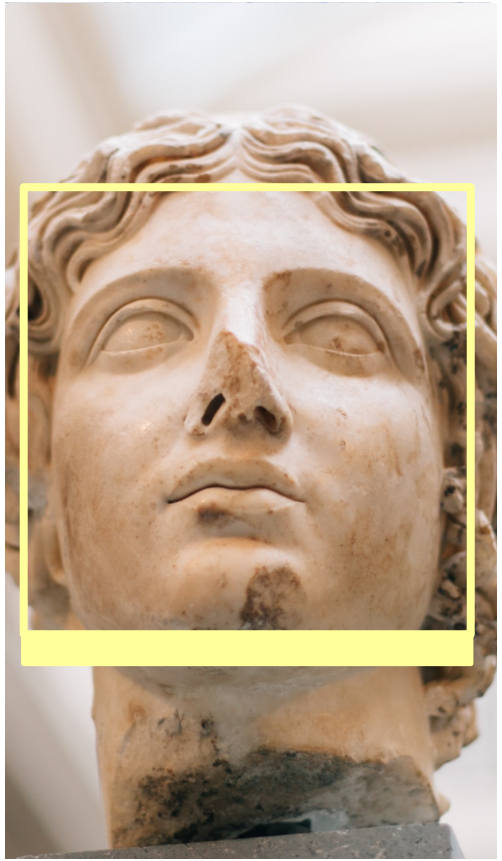
Machine Learning

e.g. Viola–Jones object detection framework

02

Deep Learning

Convolutional Neural Network (CNN)

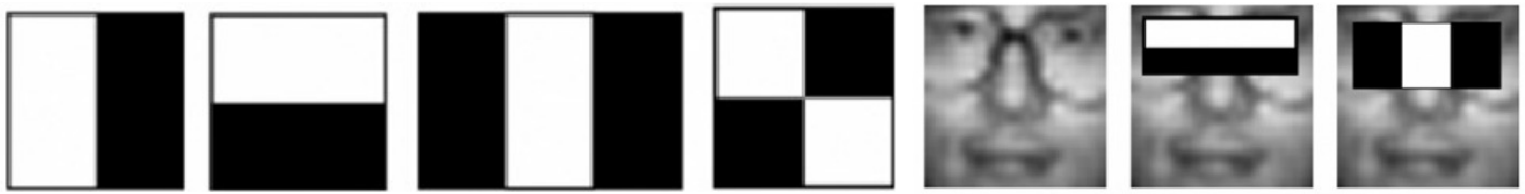


Traditional Machine Learning Approach

01

Viola–Jones Framework

1. Haar feature selection
2. Integral image
3. Adaptive boosting
4. Cascading classifier



[6][7][8]

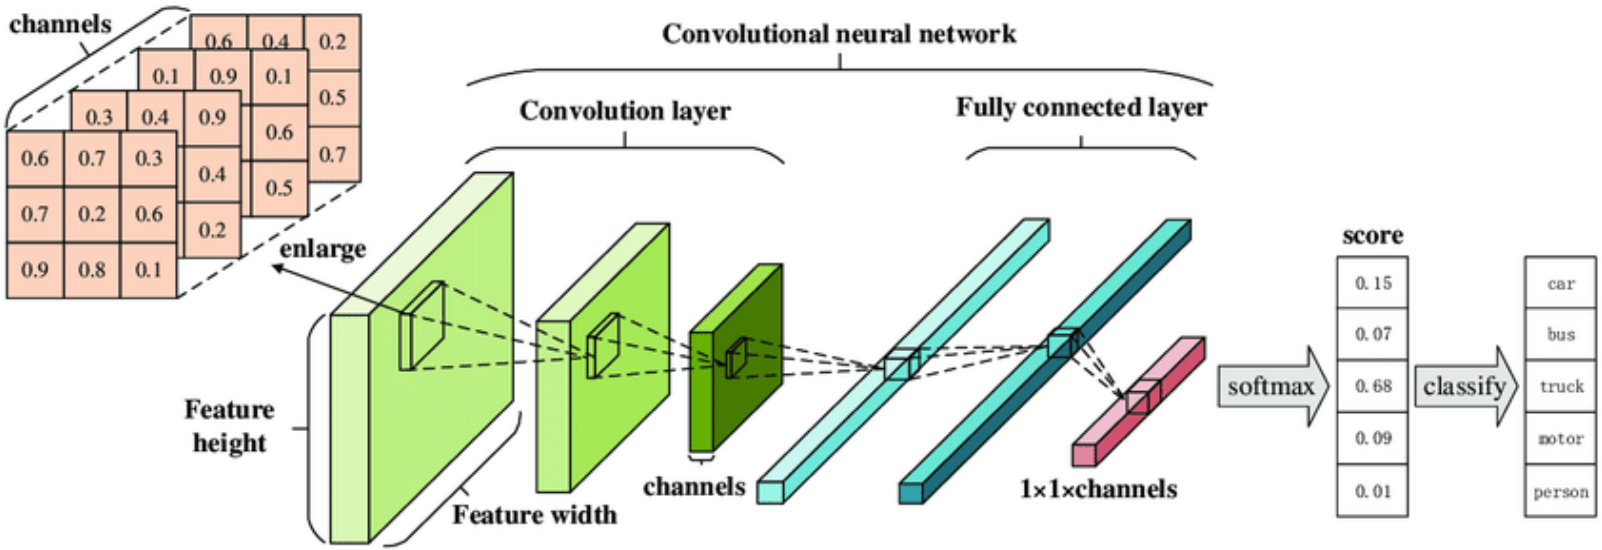
Deep Learning Approach

02

Convolutional Neural Network (CNN)

- Input layer: matrix shape
- Hidden layers: two types of layers
- Output layer

Deep Learning Approach



[9]

Demo

[10][11]

When to use ML or DL?

01

Machine Learning

Advantages
- Simpler
- faster

Disadvantages
- Harder to use

02

Deep Learning

Advantages
- Greater accuracy
- Easier to use
- More flexibie

Disadvantages
- Sometimes an overkill

Where to begin?

Computer Vision problems can be solved either via

01

MSI Lectures
